Evidence-Based Rehabilitation: A Guide To Practice

Synopsis

While evidence-based practice (EBP) has greatly influenced rehabilitation in the past decade, it continues to evolve and practitioners need guidance to implement evidence into their practice. Evidence-Based Rehabilitation: A Guide to Practice, the best-selling text providing step-by-step EBP guidance for rehabilitation professionals, has been updated into an expanded Third Edition. In Evidence-Based Rehabilitation, Third Edition Drs. Mary Law and Joy MacDermid, along with their contributors, explain evidence-based rehabilitation, the concepts underlying EBP, and build the reader's knowledge and skills through specific learning. The text is organized by the steps of the EBP process: introduction to EBP, finding the evidence, assessing the evidence, and using the evidence. EBP focuses first and foremost on making the best decisions for each client and using the best information available. For many rehabilitation practitioners, building skills in EBP is best done one step at a time. Evidence-Based Rehabilitation helps the rehabilitation student and practitioner develop his or her knowledge and skills to implement evidence-based rehabilitation in practice. Benefits of the Third Edition:

- All chapters have been updated with new information and resources
- New chapters about systematic reviews, and knowledge transfer
- Extensive guide available with specific student activities and answers for faculty use
- Critical review forms included for student use—these forms have been used by practitioners and researchers around the world for 10 to 20 years
- Recognition throughout the book that EBP in rehabilitation means bringing together research evidence, clinical reasoning of the therapist and client values and goals
- Fits the standard 3-unit course design with 11 to 12 sessions
