Community Assessment Reference Guide For Community Health Nursing: Advocacy For Population Health

Synopsis

This collection of 38 assessment tools and inventories helps nurses provide excellent nursing care for individuals, families, and population groups. Assessment tools guide nurses in assessing health status, while inventories are checklists of interventions or risk factors for selected community health problems. These tools provide direction for the development of nursing diagnoses, planning interventions, and evaluating the outcomes of care.

Customer Reviews

This book was recommended reading for my course in Nursing school on line. It is filled for the beginning nurse vital information on how to conduct interviews with patients of different groups and I should have had the bigger book this is only a reference guide the student must know that I had no use for it in the course as I had made up my own group of questions having been an RN for many years, I think it is geared toward a nurse that is new and it empowers them when they go out into the field!

Wack. So wack. This book was pointless. No useful information was found within the covers. Waste of my money. if you really need the book get a previous edition and save yourself some cash.

Would not recommend

It seemed like a good guide, but I rarely had the chance to use it. I really could have done without

this purchase.

This book was composed of worksheets and no further information. What a waste of money. Wish I could return it.

If you are not required to buy this reference guide, then don't waste your money on it. It just lists different questions.

I liked it. It is well structured. Great book for nursing students. You might not need it any more after you graduate.

Required text book for 2 courses. Lots of good information and I am keeping it in my home library for reference

This is only marginally useful for this course at Lehman College (CUNY).
